

Doxiemizer Quick Start Guide

DOXIEMIZER

What is Doxiemizer?

Doxiemizer acts as a free add on to your Doxie software to speed up the work with your scanner.

No need to rescan any document anymore only because you have lost the original files. *Doxiemizer* detects any Doxie scanner on plug in and starts the Doxie software automatically. With *Doxiemizer* you can even keep your Doxie scanner plugged in and scan page by page.

Requirements

Mac OS X	10.6.8 and above
Doxie scanner	original Doxie, Doxie one, Doxie go, Doxie flip
Doxie software	tested with version 2.4 and 2.6 http://help.getDoxie.com/doxiego/software

Installation

Double click the *Doxiemizer Installer* - that's all. After the installation is finished you can start to use the Doxiemizer right away.

How To Use

Select some images or PDFs in the Finder, press the right mouse button to open the context menu and choose *Prepare for OCR* or *Prepare for Stitching*. Copies of the original files are made and the Doxie software is opened. You will find a new *Doxiemizer* volume ready for import. You can now import, OCR or stitch and Save the files like any scan from your *Doxie go* or *Doxie flip*.

If you want to OCR a file after stitching, you can use the new *Prepare for OCR* feature from the *Send* button. After choosing this option you will hear a sound and your image is ready to import.

IRIScan Anywhere 3

If you own an IRIScan Anywhere and a Doxie, *Doxiemizer* helps you to use the Doxie software with documents scanned on your IRIS scanner; you don't have to rescan the files any more.

When you plug in your IRIS scanner *Doxiemizer* automatically prepares a copy of the IRIS files and starts the Doxie software, just like the files were scanned by your Doxie Go.

Disclaimer

The software is provided „As Is“. You are only allowed to use the Doxie™ software within the boundaries of the license agreement between you and Apparent. You are not allowed to use this software, if you don't own a Doxie go for the OCR feature or a Doxie flip for the Stitching feature. If in doubt, don't use it.

Doxie is a registered trademark of the Apparent Corporation <<http://www.itsapparent.com>>

I.R.I.S. and I.R.I.S.' product names are I.R.I.S. trademarks <<http://www.irislink.com/>>

F.A.Q.

Are the original files altered in any way?

No. *Doxiemizer* always works with a copy of your files.

I have noticed a temporary Doxiemizer volume - what is this?

The *Doxiemizer* volume is a RAM disc that holds the copy of your files. As the volume is only needed for the import it is unmounted directly after the Doxie software has finished importing the files.

What file formats are supported?

The *Prepare for OCR* feature supports jpg, gif, png, tiff, pict, bmp and PDF files, the *Prepare for Stitching* feature supports jpg, gif, png, tiff, pict and bmp files. If the original file is not a JPG the file will be converted to JPG automatically.

What is the maximum file size?

The maximum file size for OCR is 5100 x 9000 pixels and for stitching 2400 x 3600 pixels. Larger files will be scaled down and padded automatically, the original aspect ration is preserved.

I cannot see the Prepare for OCR or Prepare for Stitching options in the context menu or

I am missing some files from my selection on the import

Please check if the file type of the selected files is supported by *Doxiemizer*. See above „What file formats are supported?“

Is there any log file for Doxiemizer?

Open Applications / Utilities / Console.app and look for *Doxiemizer.log*

How to uninstall Doxiemizer

Doxiemizer comes with its own Uninstaller to make uninstalling as easy as installing. Just double click the Uninstaller and you are done.
